

DISmounting your VeraCrypt "Volume"

When you've finished working with it

As with all memory sticks, and USB plugged-in devices, you should **UN-mount**, or **DIS-mount** them before unplugging / turning off.

Make sure that the desired Volume has been selected [highlighted] :

Then click **Dismount** and then [if you've finished with TrueCrypt], **Exit**

If you want, you can save some RAM when not using VeraCrypt, by **Exiting** the programme using the Menu [click up arrow] bottom right of the Windows screen and **RIGHT-clicking** the Icon ... so as to choose **EXIT**
